The content is organized into chapters, but also massively hyperlinked, and the content can go very "deep" while also enabling a very quick and relatively high-level of information that captures the key points, suitable for college undergraduates or even high school curricula. The main page for a given chapter provides a complete high-level pass through the material that stands alone, and is highly accessible. Everything else should be a subtopic page under the main page.
1: Introduction

2: Neuron

3: Networks

4: Learning Mechanisms

5: Brain Areas
10: Executive Function

- Back Matter
