Nursing: Mental Health and Community Concepts (OpenRN)

Content is based on the Wisconsin Technical College System (WTCS) statewide nursing curriculum for the Nursing Mental Health and Community Concepts course (543-110), the NCLEX-RN Test Plan, and the American Psychiatric Nurses Association Education Council’s Crosswalk Toolkit: Defining and Using Psychiatric-Mental Health Nursing Skills in Undergraduate Nursing Education. Mental health and community health concepts are discussed while emphasizing stress management techniques, healthy coping strategies, referrals to community resources, and other preventative interventions. Nursing care for individuals with specific mental health and substance use disorders is examined, and the nurse’s role in community health needs assessments and caring for vulnerable populations is introduced.

Front Matter
1. Foundational Mental Health Concepts

2. Therapeutic Communication and the Nurse-Client Relationship

3. Stress, Coping, and Crisis Intervention

4. Application of the Nursing Process to Mental Health Care
5: Legal and Ethical Considerations in Mental Health Care
